Assignment T4: Initial Demo
Team Iceberg

Chong Hu (ch3467)
Weijie Huang (wh2447)
Zeyang Chen (zc2483)
Wenjie Chen (wc2685)

Part 1
UTC-5 2020.11.21 Saturday 9pm - 9:30pm. We completed the demo.

During the demo, we went through the project smoothly (reimbursement system), including submitting requests, changing privilege roles, interacting between roles, sending email, transferring money, OAuth, showing statistical charts, and so on.

All the user stories and functions are shown in the demo successfully. The main challenge during the demo is time management, because it's hard to compress eight user stories and all the functions mentioned above into 10 minutes. To make the demo interesting and short, we came up with a common scene. An IT developer employee Jack makes some reimbursement requests. His group manager reviewed his request, gave feedback, and approved it. Then Jack received an email and got money in his paypal account. In the final part, we signed in the administrator account and showed all the functions and charts(analysis). We overcame the challenges, and had a smooth demo.

Part 2
https://github.com/JackSnowWolf/Iceberg
V1.2.0 was shown in the demo.

Part 3
